

Room-I FAQs

Frequently Asked Questions for Room-I

Estimated recording times for the Room-I based on D1 and HD recorder settings

In HD mode, 1GB can record 8-10 minutes video.
In D1 mode, 1GB can record about 20 minute's video.

How long does the camera record for once motion has been detected?

It will start recording three seconds before motion detected. And stop recording 15 seconds after motion stopped. If there's a continuous motion, it will record continuous.

How long does the camera record before motion has been detected (i.e. pre-motion trigger recording?)

Three seconds before motion is triggered.

Can you provide the estimated recording times on the Micro SD Cards (i.e. how much recording time will be on continuous recording for a 32GB SD card)

1GB will record 1 hour. With 32GB it will be around 32 hours. Over-write function can be enabled for continuous recording.
