

Downgrade from Safari 5.0 to Safari 4.0.5

How to access your XD1 on MAC using Safari

We have noticed that Safari 5.1 does not work with the XD1 Range.
To get around this problem, you'll need to:

Download [Pacifist](http://www.charlessoft.com/) (<http://www.charlessoft.com/>) and the [Safari 4.0.5 installer](http://support.apple.com/kb/DL877) (<http://support.apple.com/kb/DL877>).

Drag the Safari 4.0.5 installer package onto the Pacifist application icon to open it.

Once the Safari 4.0.5 package is open in Pacifist, select it from the list, and then click "Install" in the upper left corner of the Pacifist window.

Leave the "use administrator privileges" box checked.

You'll be presented with a dialog box that states "Application already exists."
Check "Don't ask again for this installation" then click "Replace."

After performing this process, restart your Mac. You'll be left with an earlier version of Safari.

You can now connect to the XD1 DVR

We are currently working alongside Apple to find a resolution for this.
