

Calibrating the X100V lens

Calibrating the lens to resolve the camera showing no image

Step 1.

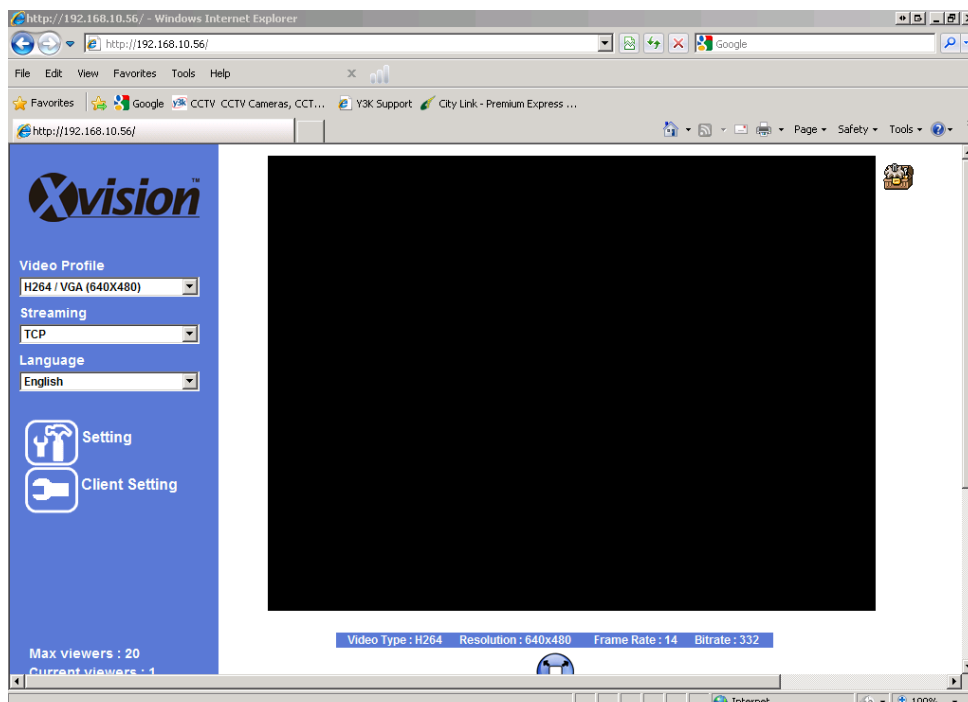

Search for your camera using the IP Wizard II software provided on the CD that came with the camera.

Step 2.

Connect to your camera using Internet Explorer; you can either double click on the camera in IP Wizard or manually type its IP address into Internet Explorers address bar.

If you find the camera image window is just black (as shown below) then please continue with this guide.

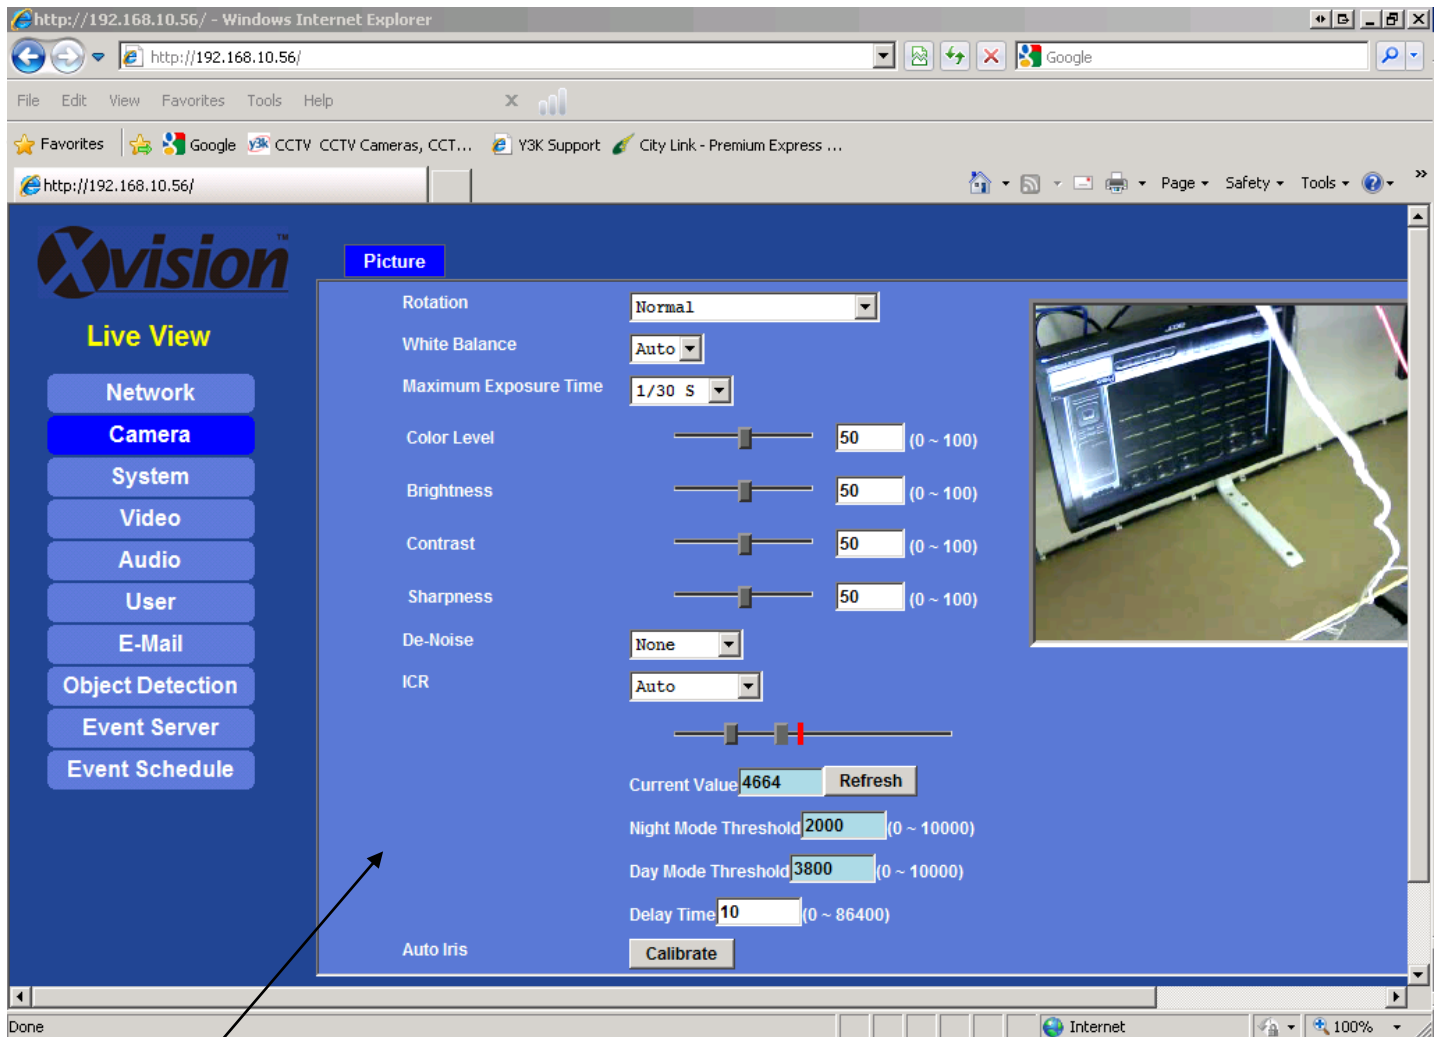

Step 3.

Click on the *Setting* button and enter the login details (the default login should be username *admin* with no password).
For more details on how to login to your camera please see the *cameras user guide*.

Step 4.

Once logged in click on the *Camera* icon on the left hand menu.

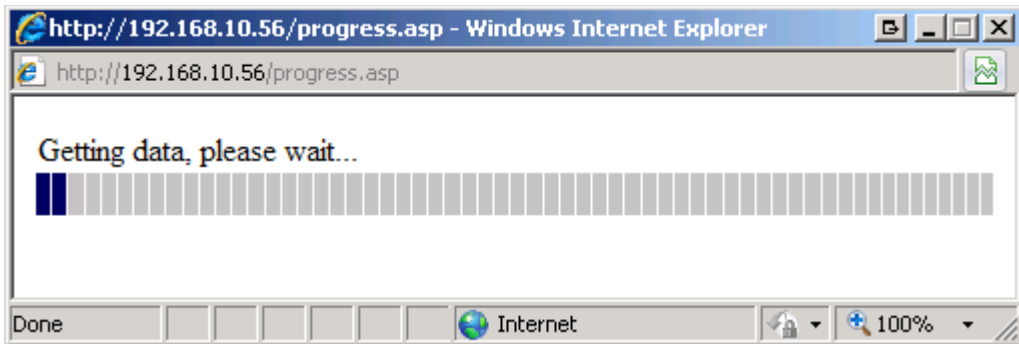

Step 5.

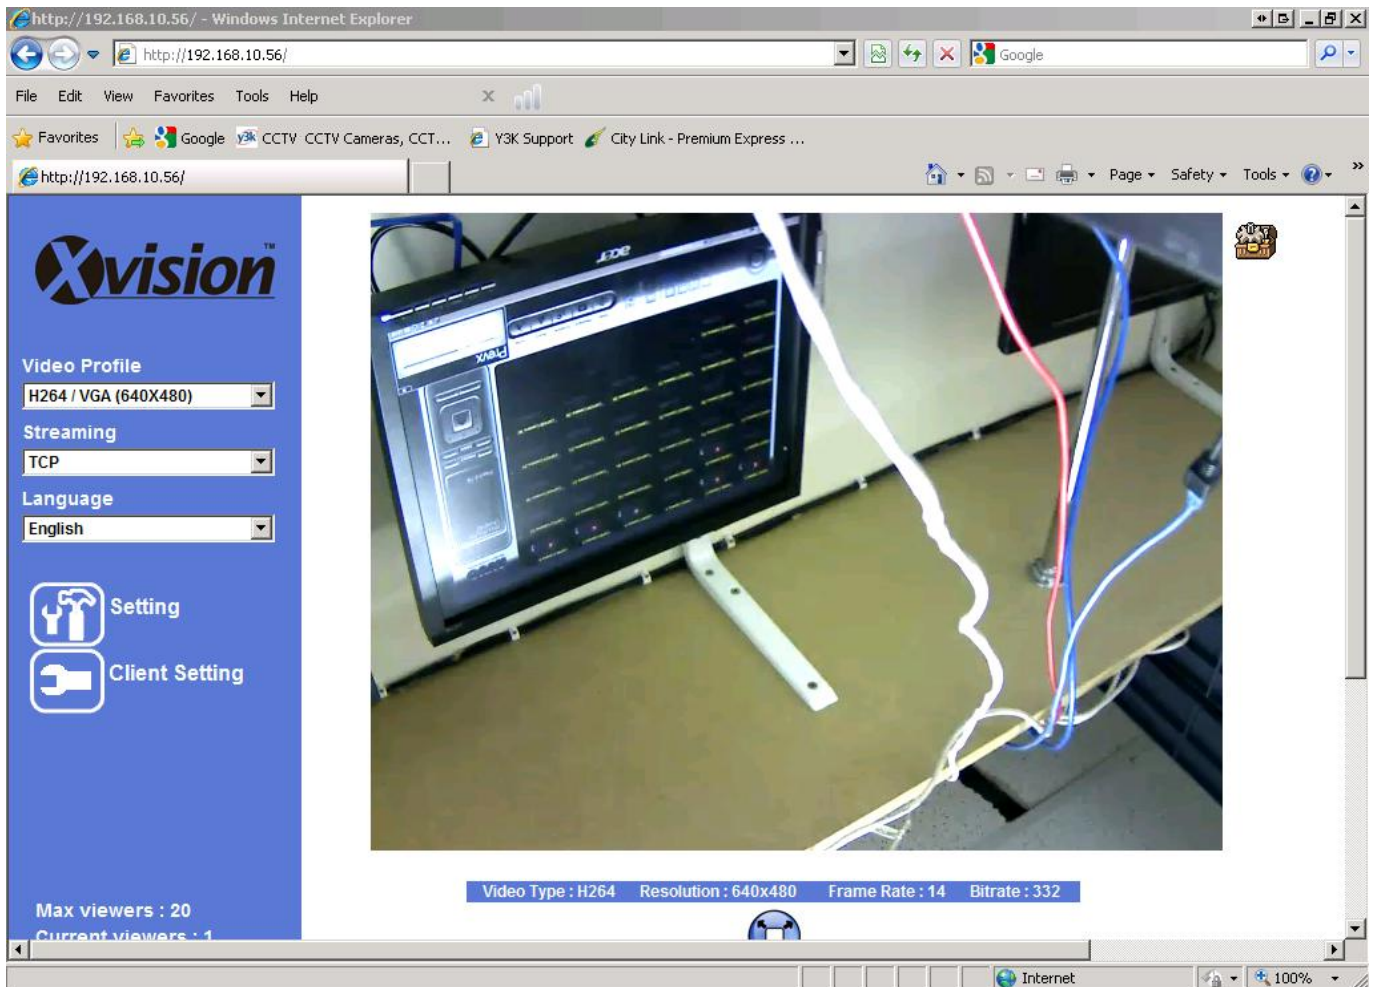

Click here and scroll down to the bottom of the camera menu page. Click the *Calibrate* button under Auto Iris.

Step 6.

The camera will then display a progress bar (shown below) while it is calibrating. This may take a minute or two.

Once the calibration has finished you should then be able to see an image from your camera.

If you have any issues please feel free to contact our technical support line on 0871 222 1430
