

## Graphics Card for a PC DVR System

Please read this if you have no images or are experiencing problems with the camera images on your Xvision PC DVR system.

If you have a Graphics Card BUILT INTO the motherboard of your computer or a 'built in' Graphics Card then it your system will is likely to experience image problems OR show you no camera pictures because it shares the PC SYSTEM'S RAM.

Please ensure that your PC meets the following criteria...

### **Graphics Card:**

You should have an **EXTERNAL AGP Graphics Card**

It should have at least **64MB Memory** on the Card itself (**not shared**).

We recommend NVidia branded graphic cards.

The higher the Graphics Card's memory (64MB, 128MB, 256MB, 512MB etc) the better the results you will get.

### **Direct X:**

You must also have **Direct X version 9 or later** installed on the system.

Latest version of Direct X can be downloaded free from Microsoft's website and is also included on the provided X-Vision CD.
