

Model: **XSD27ZDN**
Colour 550 TVL Speed Dome with
270x Zoom

Before you begin

This Engineers Manual will show you how to replace the internal fuse. This will only ever need replacing when the positive (red) and negative (black) power input wires are incorrectly connected to the power source. Damage can be caused to the camera if these instructions are not followed properly.

Please Note: Carrying out this repair without written authorisation from the manufacturer will void the product warranty.

Model:

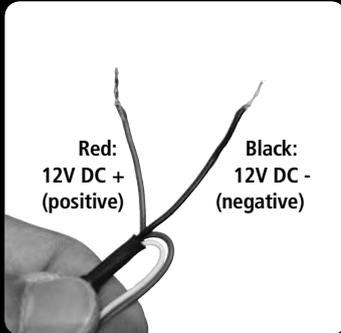

XSD27ZDN
Colour 550 TVL Speed Dome
with 270x Zoom

**ENGINEERS MANUAL FOR
REPLACING INTERNAL FUSE**

ENGINEERS MANUAL FOR REPLACING INTERNAL FUSE

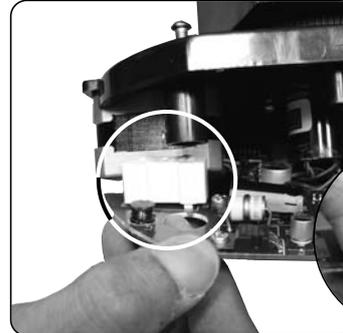

Thank you for purchasing this Xvision Colour 550TVL Speed Dome.
Please read this Engineers Manual before attempting to repair the fault.

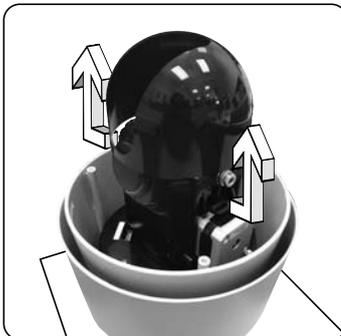

THE FAULT
Loss of Power due to blown fuse

THE CAUSE
Incorrect wiring of 12V DC positive and negative power inputs resulting in blown fuse

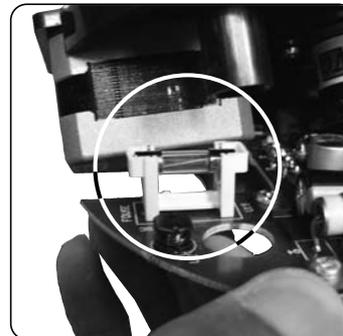

THE FIX
Read below for instructions

STEP 4.
Locate the fuse box and lift off the cover.

STEP 1.
Carefully remove the camera's cover from its base.

STEP 5.
You should see that the fuse sitting in the holder has blown.

Replace the blown fuse with a new 3A, 12V DC fuse and re-cover the fuse holder.

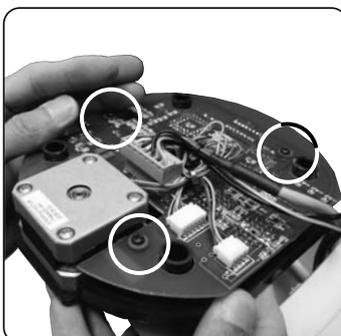

STEP 2.
Unscrew the 4 fixing screws that hold down the camera body and base to the lower casing.

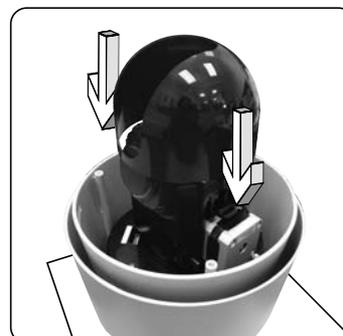

Carefully lift up the camera base from the casing.

STEP 5.
Put the camera parts back together using the screws you removed earlier.

STEP 3.
Unscrew the 3 fixing screws from the underside of the camera base so the circuit board can be lifted up from the base.

STEP 6.
Re-attach the camera's cover ensuring it clicks back into place.

Refer to the XSD27ZDN Product Manual for further installation and operating instructions.
